EXPERIENCE

Farm Work Experience

I have extensive experience working on a farm from a young age while attending high school. This hands-on experience taught me valuable skills such as teamwork, problem-solving, and adaptability. I developed a strong work ethic by working long hours in a physically demanding environment and learned to be self-sufficient. Additionally, I gained practical knowledge of working with limited resources, staying in touch with nature, and understanding the importance of efficiency in a real-world work setting.

Curently I am a second-year Software Engineering student at CTU Stellenbosch with a strong foundation in both software and hardware systems. I have completed a Programming Fundamentals course, where I gained experience in Python and software development principles. In my second year, I expanded my skills in web development, working with HTML, JavaScript, and CSS, and developed a functional website while also gaining basic knowledge of Microsoft Azure servers. I have hands-on experience with troubleshooting, installation, and maintenance of hardware and software systems, as well as proficiency in version control using Git and GitHub. I am passionate about technology and eager to apply my skills in an IT role that involves both software development and hardware support. My goal is to contribute to a dynamic IT team where I can further develop my expertise and grow professionally in the field.
